DZHK-HiGHmed-Symposium

Cardiology meets Systems Medicine and Digital Health Solutions

The era of Digital Health surpasses traditional healthcare solutions by fusing new heterogeneous / multimodal clinical data types (imaging, molecular diagnostics, electronic health records, etc.) with services and data obtained by direct patient participation (via mobile devices and sensors) into a joint analysis framework.

HiGHmed consortium and DZHK team up to organise a Symposium on Digital Health, which highlights modern approaches across **five relevant topic areas**:

- **Mobile Apps, Wearables, Implemented Methodology**
- **Patient-Centric Molecular Medicine**
- **The Use Case Cardiology in HiGHmed-building Synergies**
- **Imaging Modalities**
- **Data Fusion, Analytics and Modelling**
