

University Hospital Heidelberg

Veröffentlichung: 26.03.2013

Our laboratory studies basic aspects of immune regulation by dendritic cells. The group is part of a network of research institutions within the Collaborative Research Program "SFB 938" „Environment specific control of immune reactivity“ which is dedicated to studies on the human immune system, constituting a vibrant environment for research. We are looking for a new

Postdoctoral Researchers (m/f)

A position for highly motivated postdocs is available starting from June 2013 in the laboratory of Prof. Dr. Knut Schäkel, Department of Dermatology.

The successful candidate will join an experienced scientist research team in the analysis of the roles of dendritic cells in skin inflammation. We employ a wide range of techniques, including cell signaling studies, gene expression profiling, diverse cellular immune assays, and a skin-humanized mouse model to study how dendritic cell signaling regulates the induction of skin inflammation.

Qualifications

The applicant should hold experience in immunology and cell biology. He/She is required to hold an MD or a PhD in biology, molecular biology, or a related field, as well as strong written and oral communication skills. The working language is English; knowledge of the German language is not necessary.

Research environment

The Collaborative Research Program "SFB 938" and the large biomedical campus in Heidelberg provides an international and lively research environment with highly interacting groups as well as state-of-the-art technologies.

The employment contract is based on contracts for the civil service (TV-L E13).

How to apply

To apply, upload a PDF file containing a CV, 2-3 references with contact information, and a statement outlining your interests and relevant work experience to be sent to

Jennifer.Plume@med.uni-heidelberg.de.

Deadline for applications is **May 15th, 2013**.
