

The Impact of the Demographic Transition on Global Disease Patterns

Alex C Ezeh & Catherine Kyobutungi
African Population & Health Research Center

"Global Health in the 21st Century - celebrating 50 years of Heidelberg's contribution"

14th September 2012

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Outline

- **The Demographic Transition**
- **Key Features of the Transition**
- **Implications**
 - **On Regions of the World**
 - **Global Disease Patterns**
 - **Inequity**
- **Summary and Conclusion**

Demographic Transition

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Demographic Transition

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Demographic Transition

- Historical accuracy esp. in developed world (as a group)
- Transition in developing world shaped by:
 - Faster decline in death rates (death control imported and applied)
 - Fast economic growth & social change (China, Brazil...)
 - Persistently high fertility despite decline in child mortality (access to FP, SES factors, high % rural
 - Higher growth rates (younger populations, momentum)
 - Emergence of infectious diseases (esp. HIV/AIDS) affecting reproductive age groups
- Many developing countries stuck in Stage 2

Key Features of the Transition

- **Overall Global Population Growth**
- **Differences by Region and Wealth**
 - Population Ageing
 - Youthful Populations
- **Urbanization /Slum growth (also driver)**

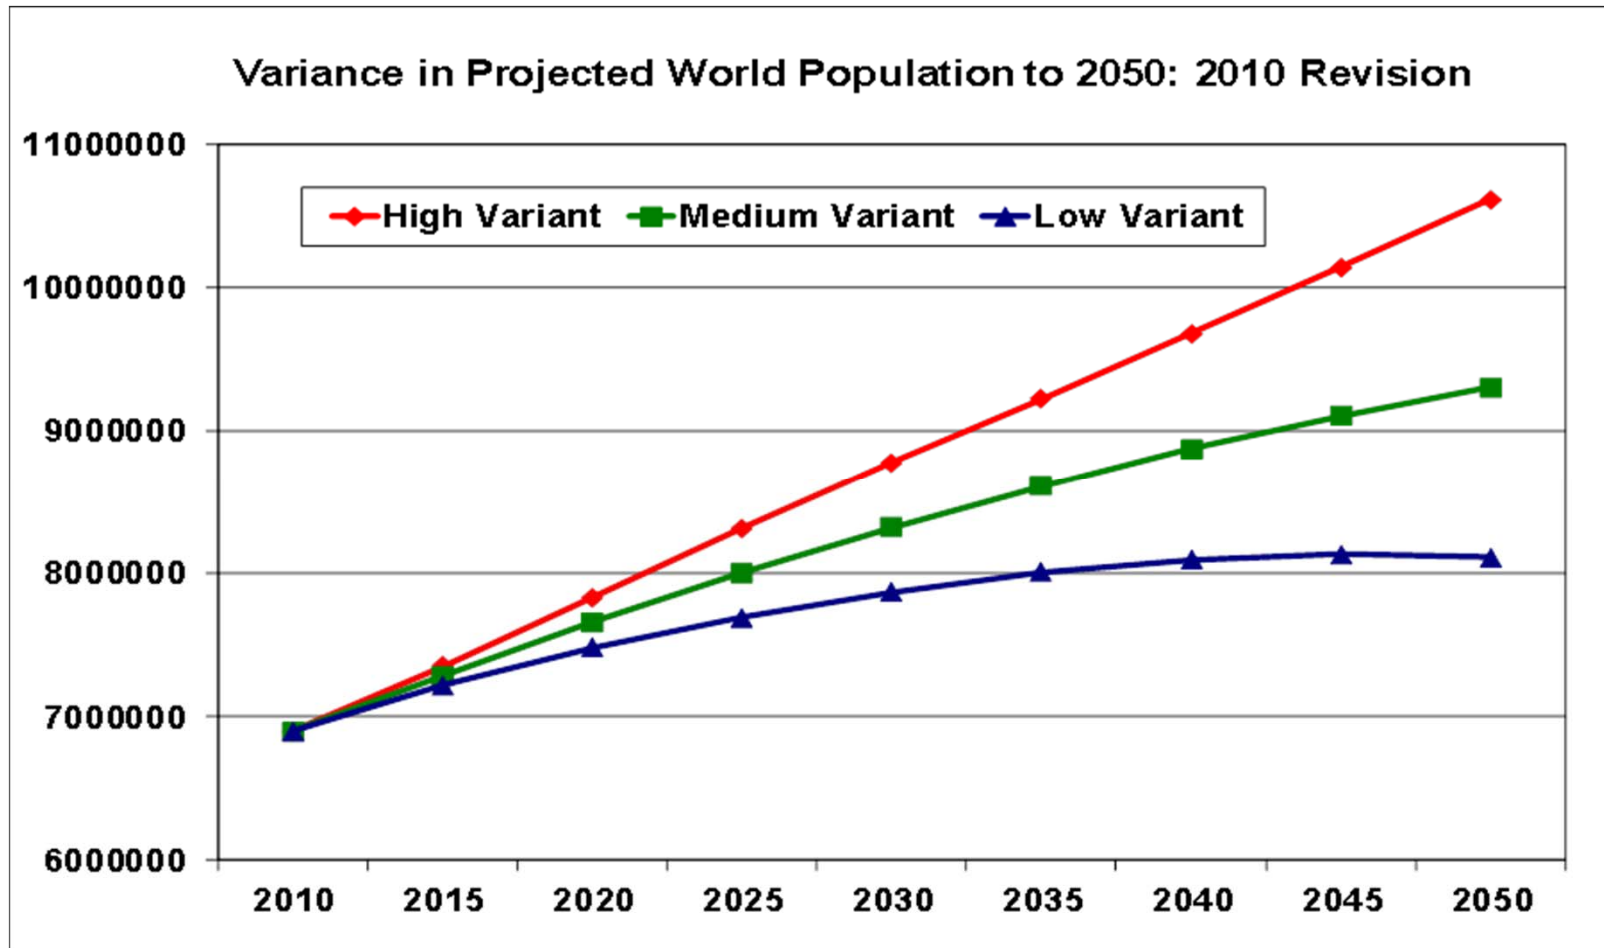

Global Population Trends

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Global Population Trends – 2010 - 2050

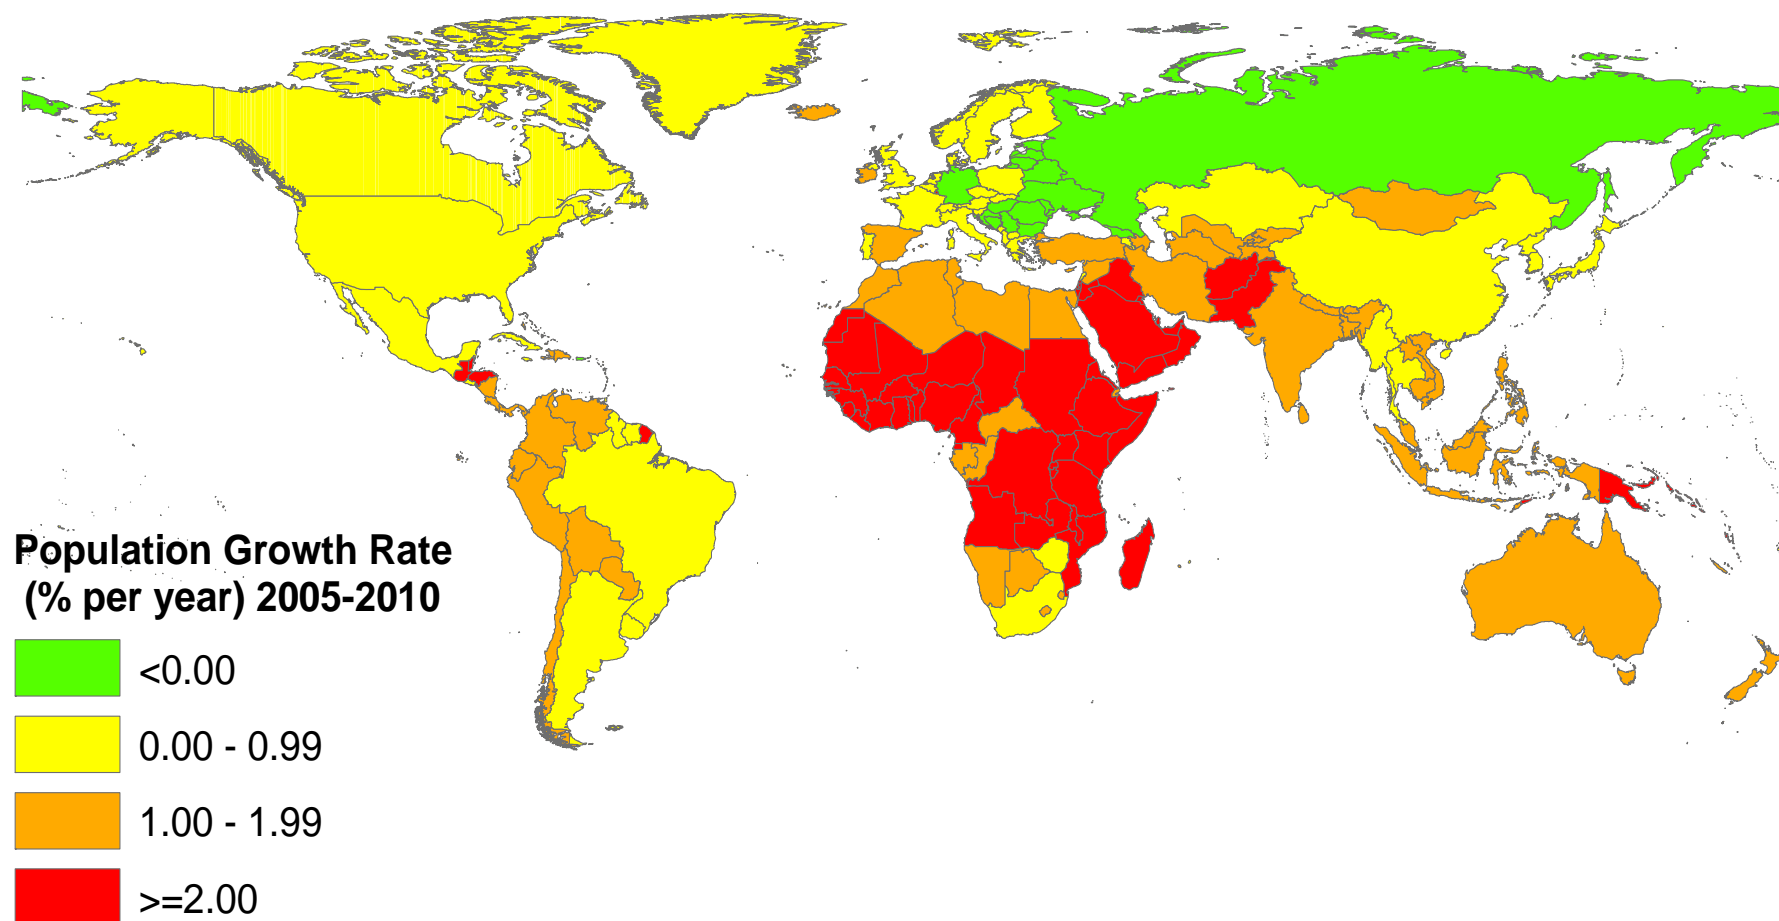

Source: United Nations 2011

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Population growth rate by country

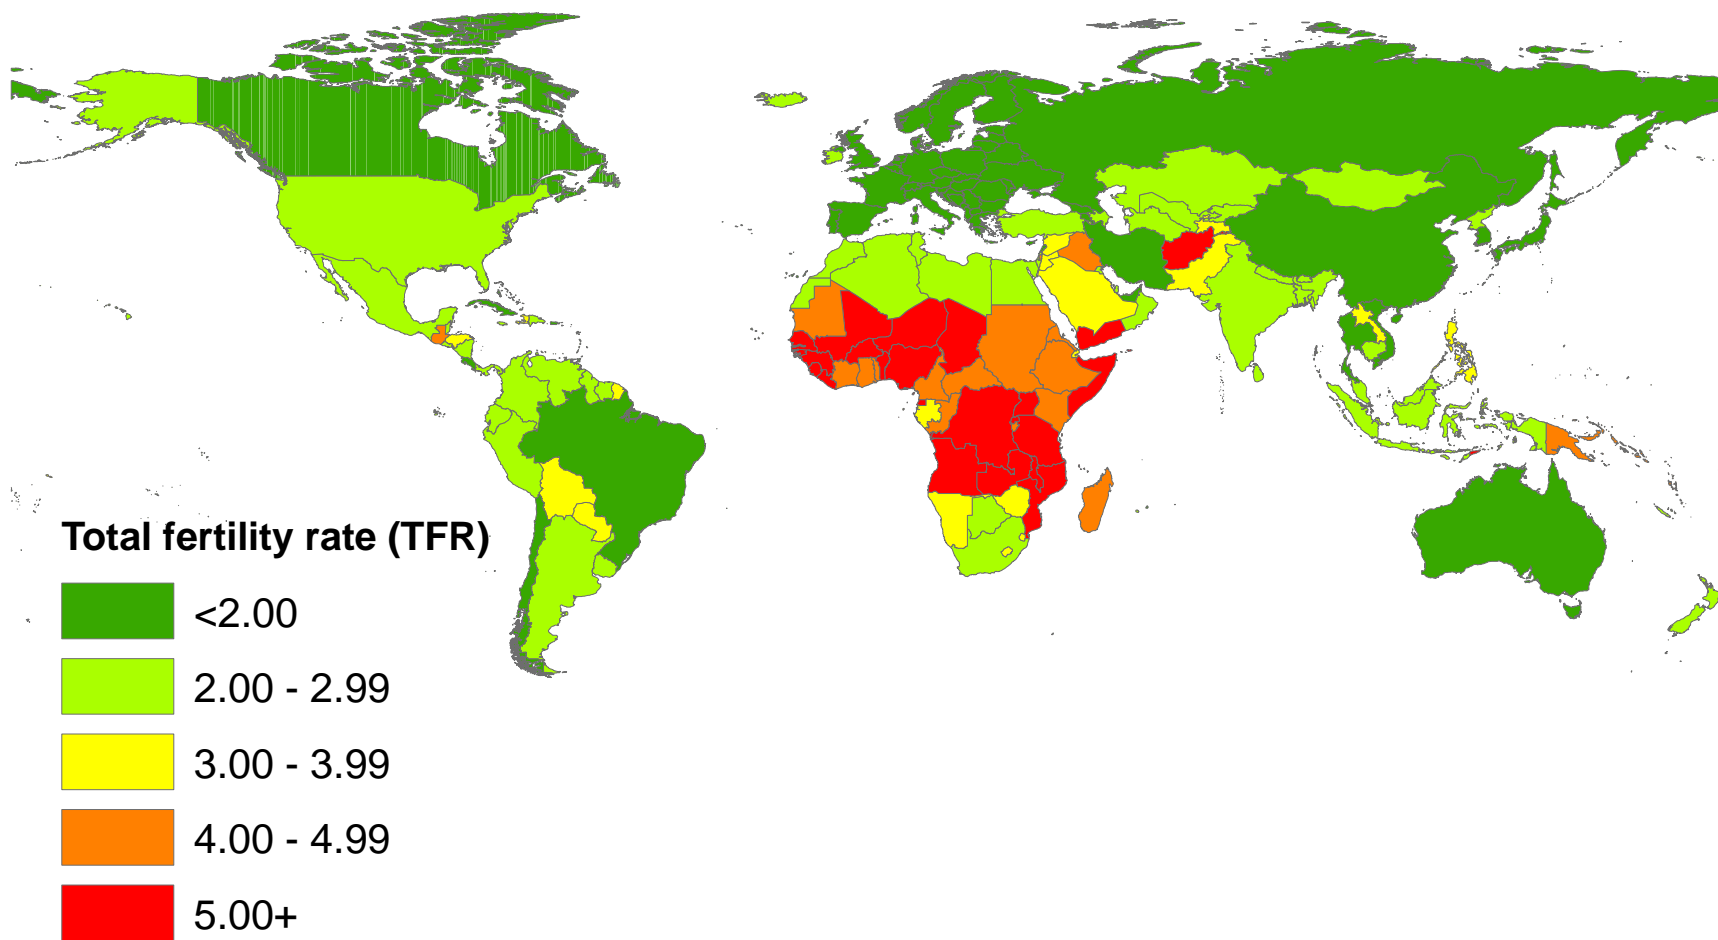

Source: United Nations 2011

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Total fertility rate (TFR) by country

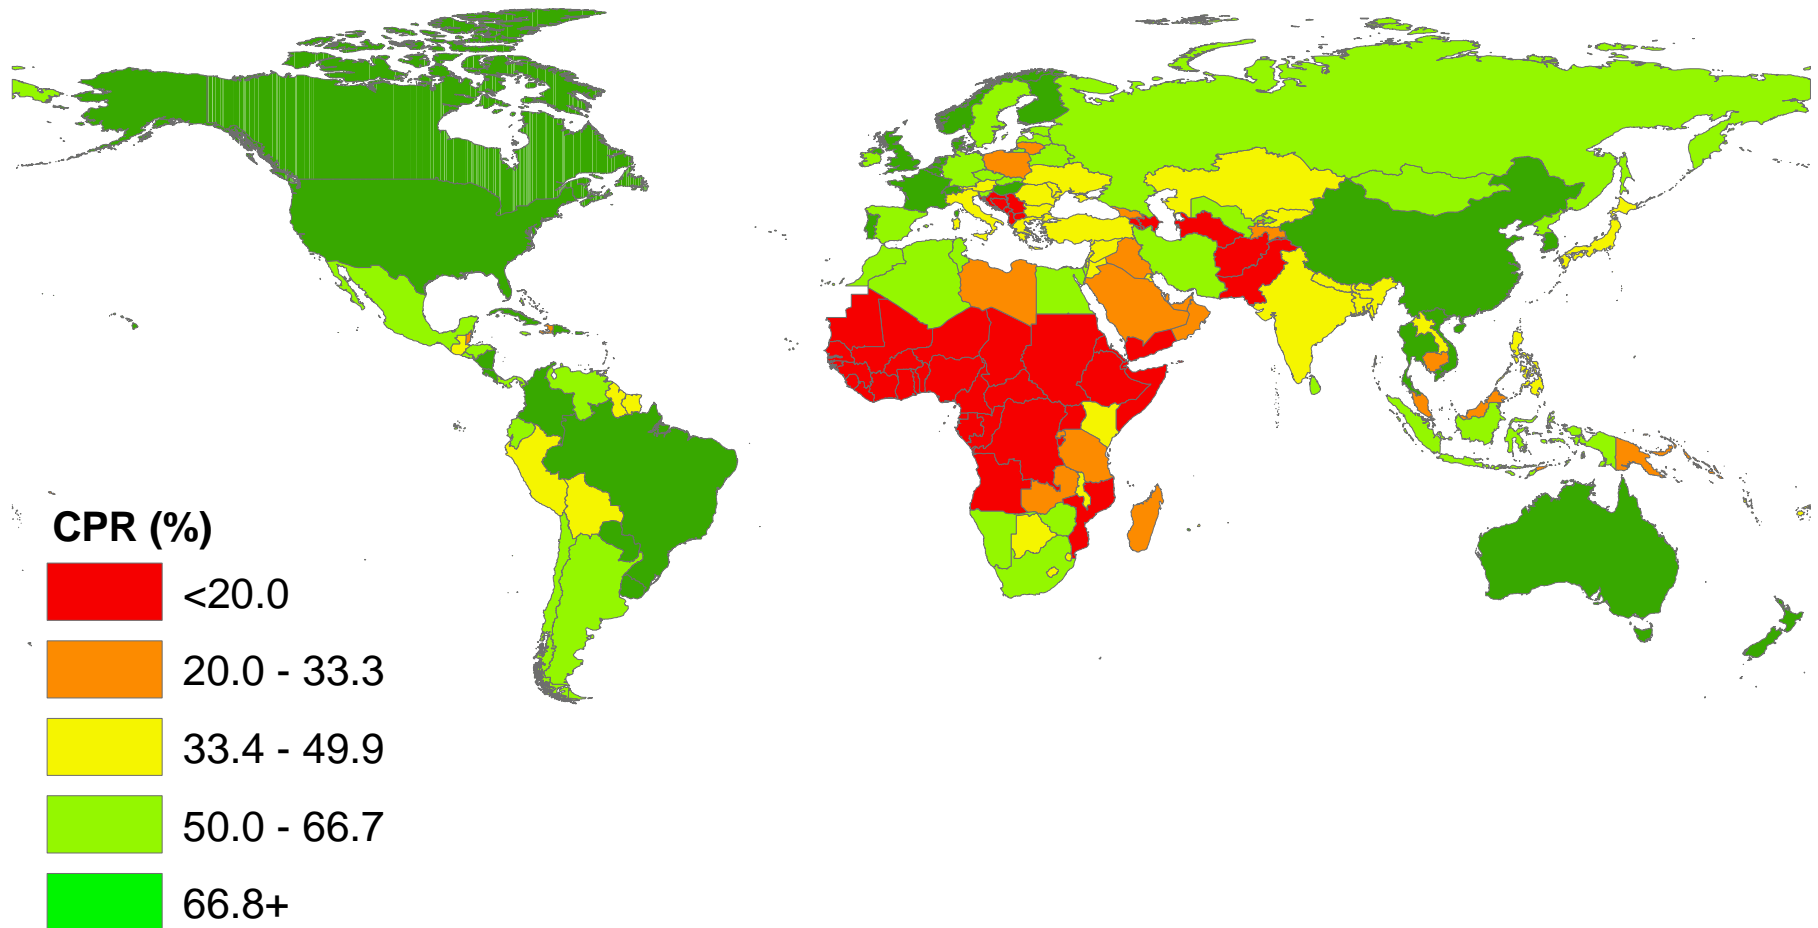

Source: United Nations 2011

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Contraceptive prevalence rate (CPR) - Any modern method

Source: United Nations 2011

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Where will the next 2.41 Billion be added?

2010-2050 Growth

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Population Ageing

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Population Ageing

Rise in population share (%) of older persons (60+), 2010-2100

Source: United Nations 2011 World Population Prospects

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Population Ageing

Increase in absolute number (in millions) of older persons (60 +)
2010-2100

	2010	2050	2100	Increase factor (x)
Sub-Saharan Africa	43	163	644	14.9
Latin America & Caribbean	59	188	236	4.0
Asia	414	1,253	1473	3.6
North America	64	121	166	2.6
Europe	161	242	219	1.4

Source: United Nations 2011 World Population Prospects

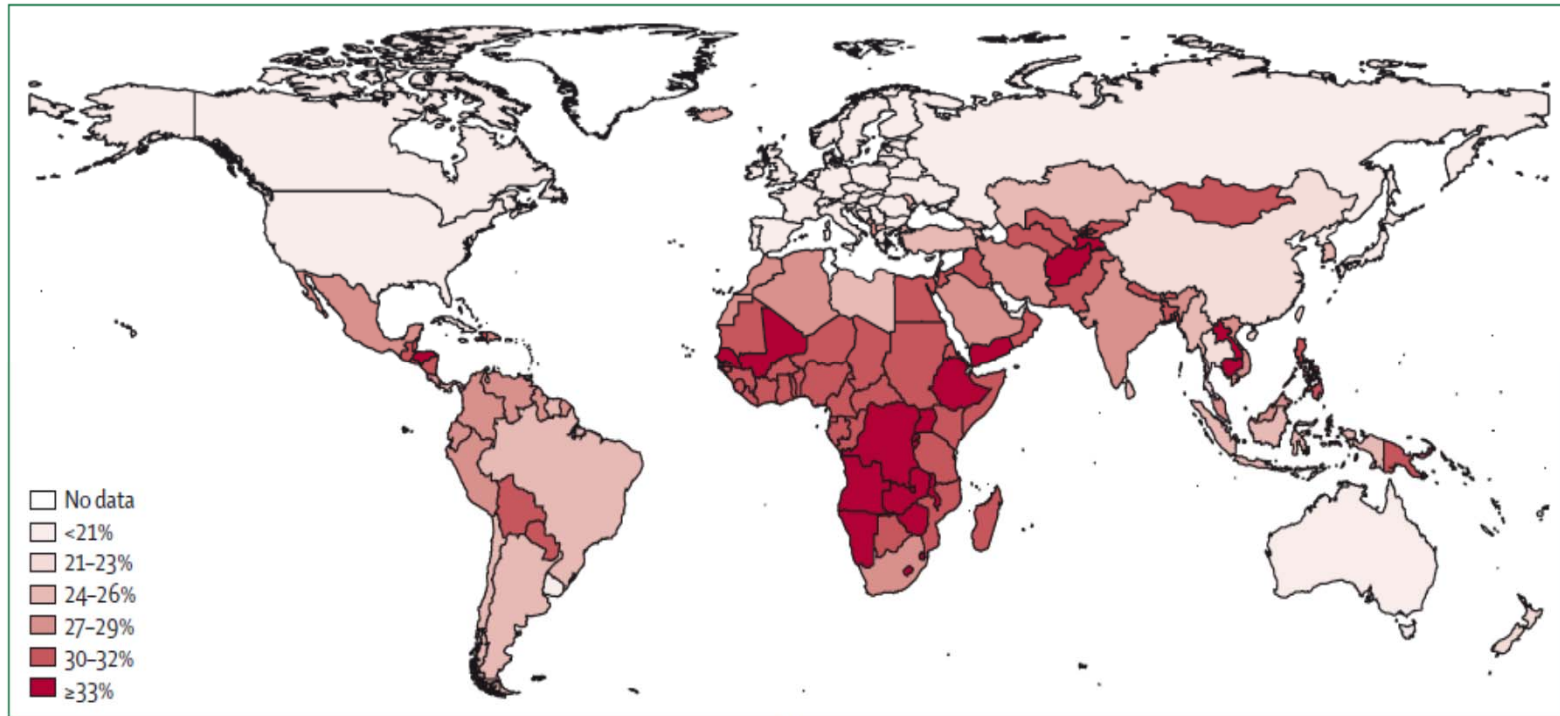

By 2050, SSA will have more older people than N. America

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Youthful Populations

Distribution of people aged 10–24 years as a % of the population

Source: United Nations, 2010 World Population Prospects (2008 revision)

Young people constitute about 25% of current world population

17% of 13-15yr olds use tobacco

90% of Adult smokers start before the age of 20 years

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Urbanization

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

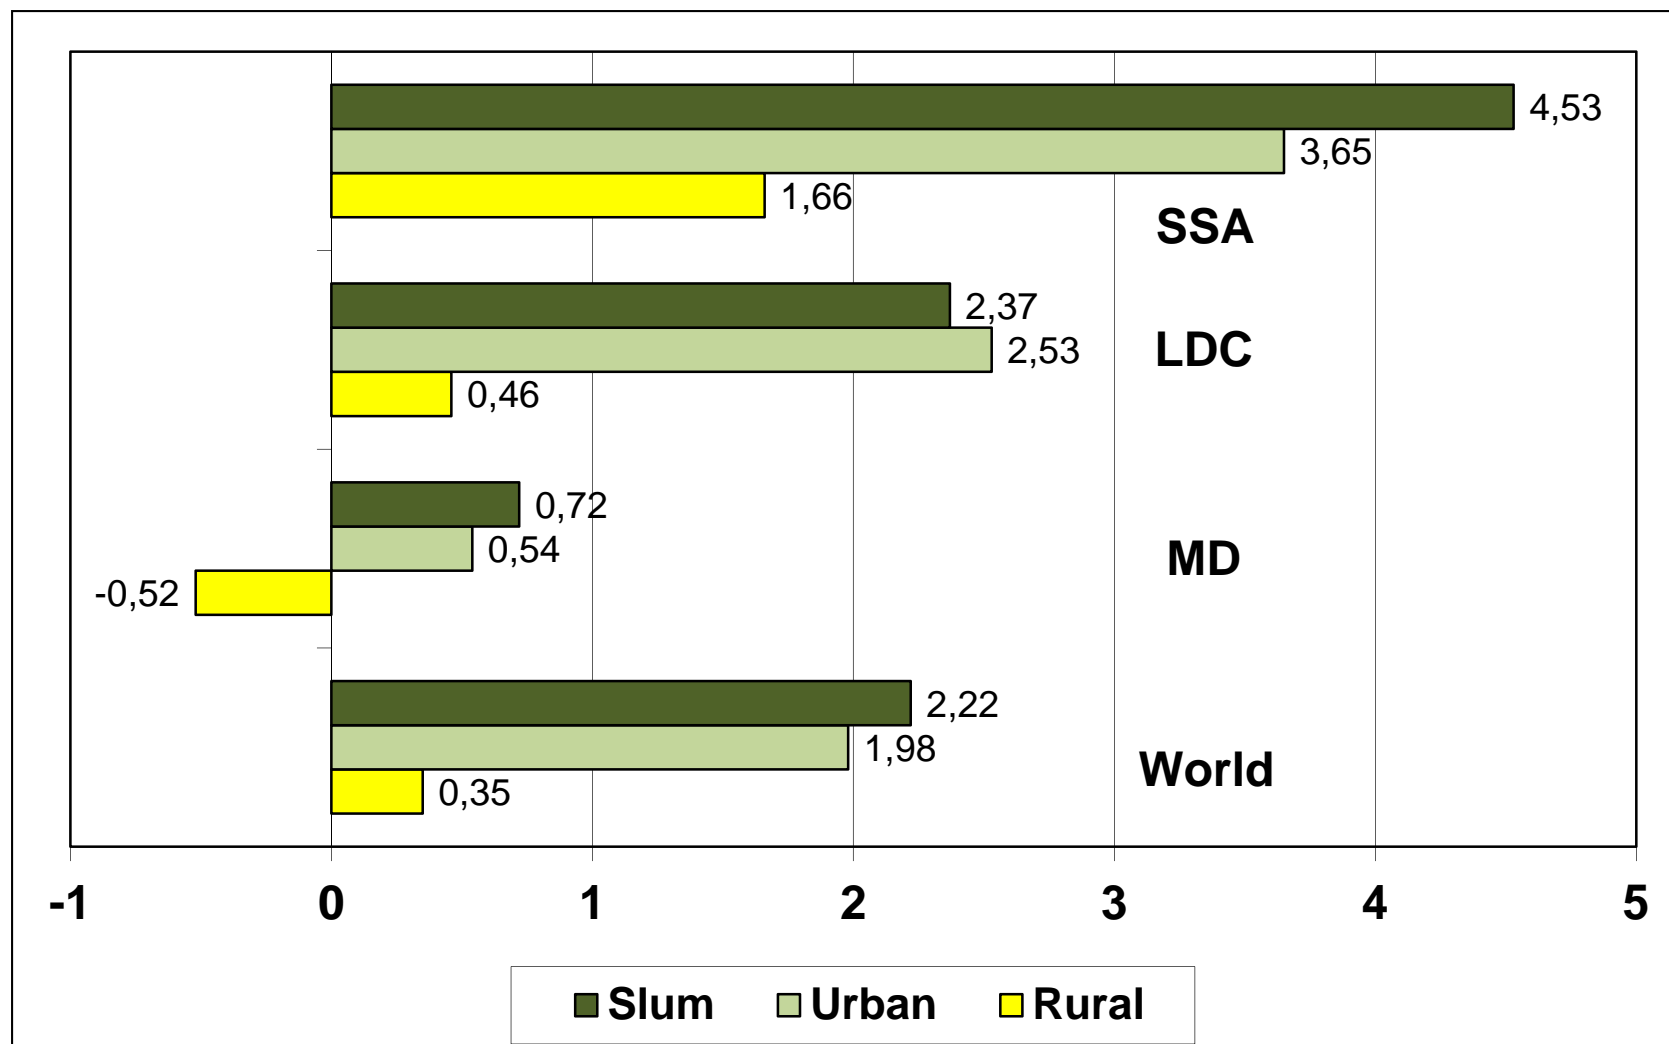

Urbanization

2010-2050 Growth

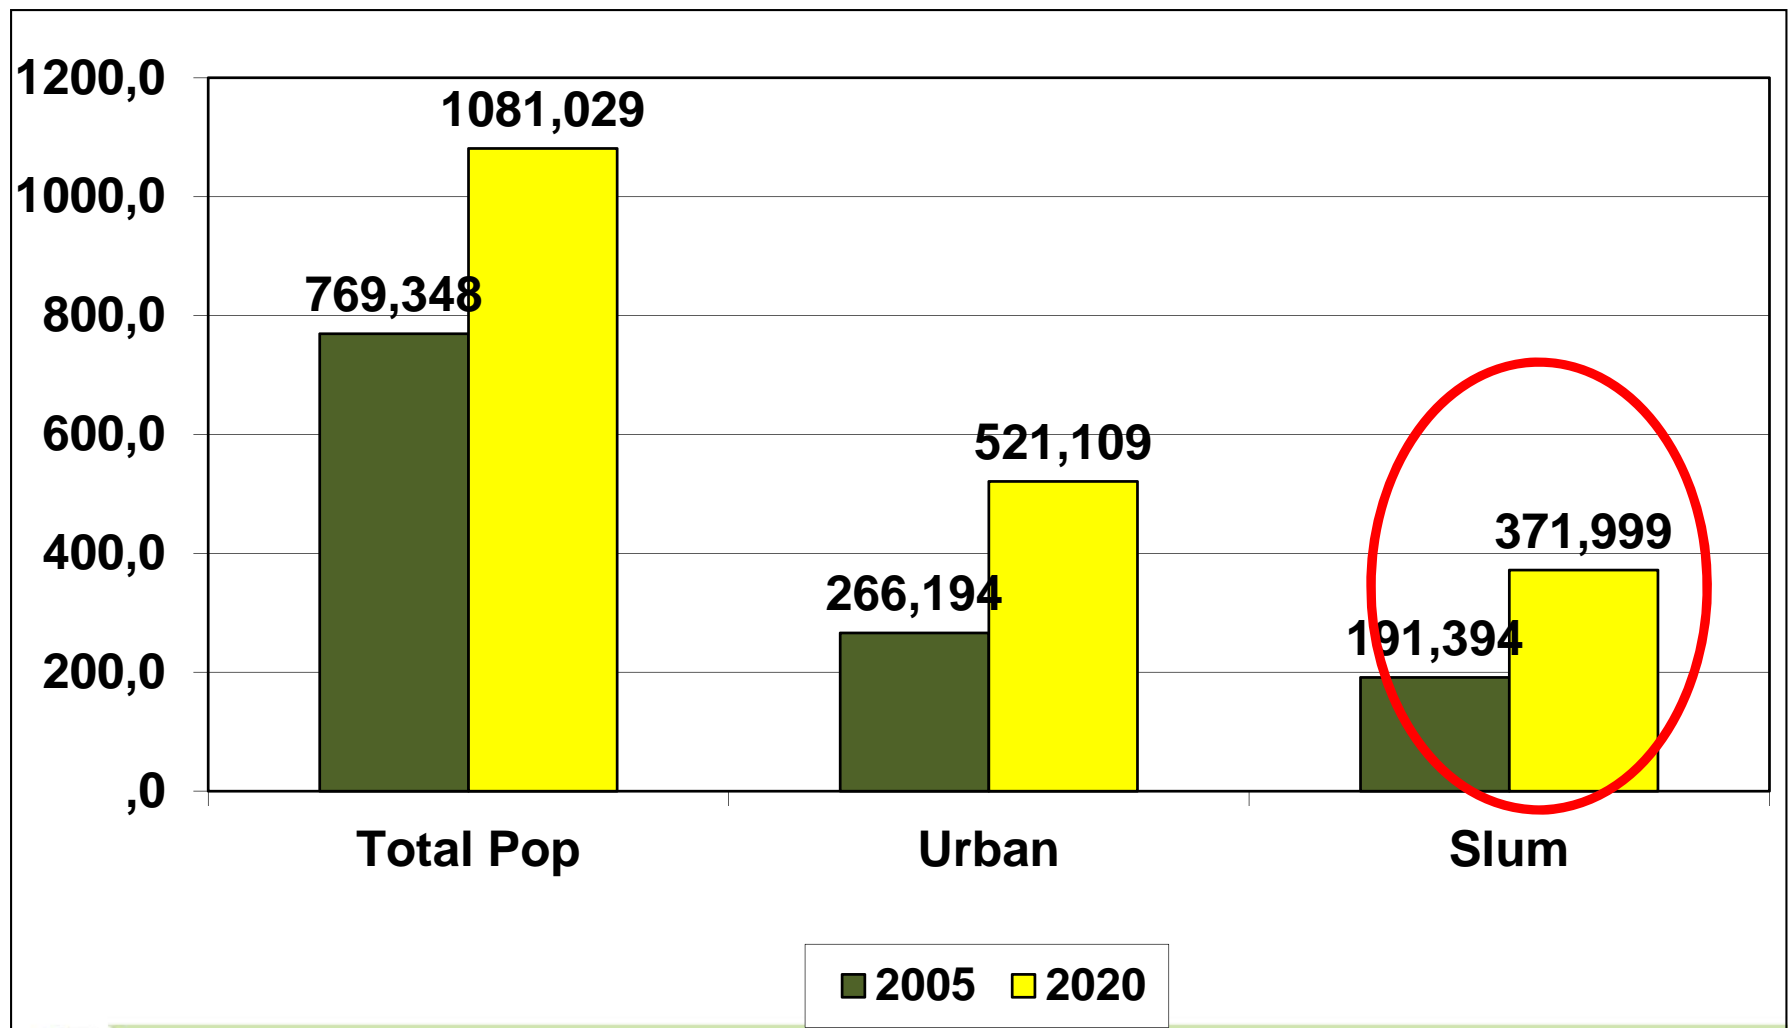

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Population Growth Rate by Region and Residence, 2005-2010

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Projected Growth of Total, Urban and Slum Populations in SSA (In Millions)

The Many Faces of Nairobi

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Health Challenges in Nairobi

- **Communicable diseases**
 - Overcrowding
 - Poor WASH infrastructure
 - Limited access to health services
 - High risk behaviour
- **Injuries (both intentional and unintentional)**
 - Road safety (lack thereof) with increasing traffic volumes
 - Limited access to emergency services
 - Lack of social cohesion – high interpersonal violence
 - Crime and insecurity
 - Limited access to law enforcement and judicial services
- **Non-communicable Diseases**
 - High risk behaviour
 - Environmental pollution
 - Limited access to health services

Current risk and future CVD burden

Diabetes prevalence, awareness, treatment and control – Adults 18+

	Has diabetes (a) n=298	Aware (b) n=101	Treated (c) n=72	On treatment (d) n=52	Controlled n=23	Well Controlled n=3
As a % of N (5190)	4.3%	0.9%	NA	NA	NA	NA
As a % of (a)	NA	19.9%	13.4%	10.3%	4.5%	0.7%
As a % of (b)	NA	NA	67.5%	51.8%	22.5%	3.5%
As a % of (c)	NA	NA	NA	70.4%	26.9%	5.2%
As a % of (d)	NA	NA	NA	NA	43.3%	6.7%

Findings on High Blood Pressure not any different

Undetected, untreated and uncontrolled risk factors point to a future huge burden of CVD

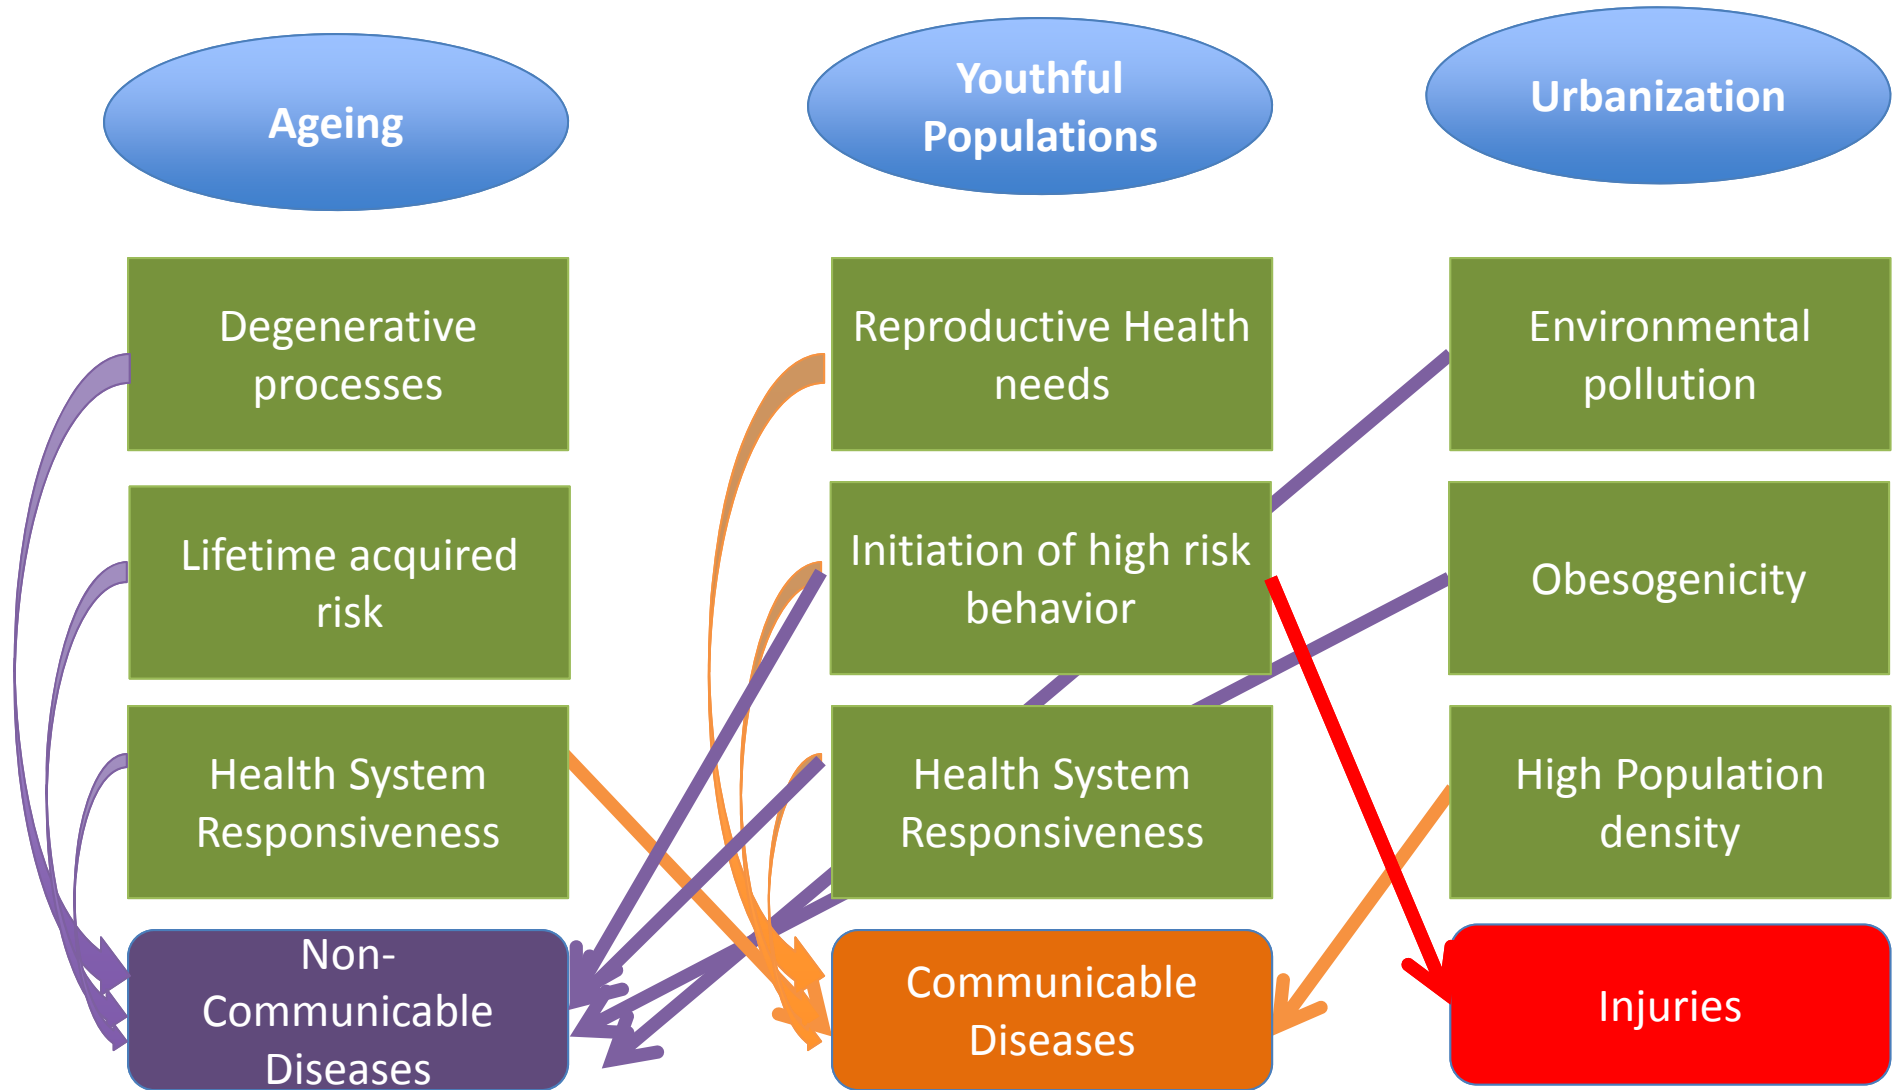

Implications on Global Disease Patterns

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Implications of Key Demographic Trends

To be a global center of excellence, consistently generating and delivering relevant scientific evidence for policy and action on population, health, and education in Africa

Implications of Key Demographic Trends

Inequity

- Existing inter-country inequalities by wealth, in mortality burden maintained
- Intra-country inequities
- Intra-urban inequities

Conclusion

A combination of key demographic trends will ensure that non-communicable disease **maintain** their dominant place as the main contributor to the global burden of disease..... and **obtain** this place in all regions of the world

Happy 50Th Anniversary, IPH

Thank You for Your Attention
